Biotech Labs Final questions

1. Compare your squad sample with the rest of the squads. What similarities do you see?
2. Compare your squad sample with the rest of the squads. What major differences do you see?
3. Outline the processes you performed in the lab (i.e. extracting DNA). What was each section's purpose?
4. In a forensic science lab that performs investigations such as these, explain what would you use your results for?
5. Given that DNA replication in a cell was the basis for some of the steps in this lab, explain which part and why.
